

IN THE SPECIFICATION

Please amend the abstract as follows:

A disk drive arrangement [[(5)]] is provided for use in a disk drive enclosure having a number of such arrangements. The enclosure is arranged to provide enclosure services to the arrangement [[(5)]] . Each arrangement [[(5)]] includes a disk drive [[(10)]] and an adapter [[(14)]] coupled between the disk drive [[(10)]] and a serial data connection 40 to a serial bus of the enclosure. The adapter includes serial to non-serial circuitry [[(30)]] , such that the interface is coupled non-serially [[(15, 35)]] to the disk drive [[(10)]] and serially [[(40)]] to the bus. The bus is connected to an enclosure services processor in the enclosure. In this way enclosure services data may be exchanged between the processor and each arrangement [[(5)]] of the enclosure, thus providing enclosure services to each disk drive [[(10)]] of the enclosure with a serial bus.
